

***PDO thread lift - Treatment is individualized;
set up your consultation***

A thread lift is a non-invasive procedure wherein temporary sutures are used to produce a subtle but visible "lift" in the skin. Instead of removing the patient's loose facial skin surgically, the physician simply suspends it by stitching up portions of it. This has the effect of pulling the skin back slightly and therefore lifting and tightening the face.

***Sculptra non invasive butt lift - Treatment is individualized;
Call to set up your consultation***

Sculptra is a non-surgical gluteal augmentation designed to enhance the shape of your butt and achieve your desired look. This treatment uses the body's own rejuvenation response to gradually increase your buttocks, reduce cellulite, and boost your self-confidence. This non-surgical buttock injection works to enhance the shape of your butt and is the perfect alternative to surgical butt implants. However, this treatment is meant to gradually increase the buttocks to give you a more "natural" look and feel.

PCA SKIN

Formulating products that improve the health of your skin is a cornerstone of PCA SKIN®. PCA SKIN products are free of synthetic dyes and fragrances, mineral oil, lanolin and phthalates and are not tested on animals. PCA skin line of daily products can be customized to a regimen unique to your skin and can deliver healthy, beautiful, younger-looking skin and treat acne, discoloration, and aging.

Epicuren Skin Care

Epicuren is a result-driven, anti-aging natural beauty brand, offering pure innovative skin care products using the most natural ingredients available. The Metadermabolic Enzyme encourages the skin to self-rejuvenate, similarly to how aerobic exercise supports your metabolism. Epicuren offers a scientifically advanced and extensive collection of products developed to address every face and body need for all skin types.

DermaFrac Micro-Needling - starting at \$200

DermaFrac micro-needling with an individualized serum is pain-free with no downtime. It is safe and effective for many skin types and has been shown to improve skin conditions such as congested, oily skin, scars, stretch marks, skin dehydration, superficial lines and wrinkles, hyper-pigmentation, sunspots and uneven skin tone. Ask about the new growth factor serum.

Genesis Biosystems Microdermabrasion - \$90

Microdermabrasion has proven to be clinically effective for dry or oily skin, fine lines and wrinkles, sun damaged skin, hyperpigmentation, and acne prone skin. Offering three different grit strengths, your microdermabrasion treatment is customized for your skin type and concerns. This non-invasive, painless procedure removes dead epidermal cells revealing smooth, exfoliated skin.

PCA Skin Chemical Peels - starting at \$99

Chemical peels are safe and effective in improving and preventing many skin conditions. Our skin naturally exfoliates, but as we age the process tends to slow, resulting in a dull complexion. Chemical peels speed up the exfoliation process, encouraging cell turnover that leaves the skin looking fresh and healthy.

Epicurean Discovery Signature Facial - \$65- \$110

Experience unparalleled results in just one treatment with Epicurean's award-winning Facials. An advanced enzymatic peel is coupled with layers of skin-tightening masks, which are systematically applied to mimic an aerobic, toning exercise for the face, visually improving muscle tone, firmness, and elasticity.

The Secret Radiofrequency Microneedling - Starting at \$600

The Secret RF treatment is ideal for improving aging skin, photodamage, fine lines and wrinkles on the face and neck, scars, acne scars, skin quality and stretch marks/striae. Unlike traditional microneedling, Secret RF delivers energy below the surface, where it is needed most to help regenerate and revitalize the tissue.

Laser Hair Reduction - \$99-\$350 per session, package discounts available

Laser hair removal is one of the most popular cosmetic treatments in the U.S., as it allows men and women to not only remove unwanted body hair but also prevent it from growing back. After just a few treatments, a person may be able to eliminate the need to constantly shave, wax or epilate.

Laser Texturing - \$199

Non-ablative laser skin resurfacing, or laser texturing, can improve skin by minimizing fine lines/wrinkles and eliminating redness for more balanced skin tone. Resurfacing also tightens skin, encourages collagen production, improves acne or surgical scars and helps reduce pore size.

Photo Facial - \$99-\$350 per session, package discounts available

IPL treats sun damage, hyperpigmentation, age spots, freckles, spider veins, redness, rosacea, vascular lesions, texture problems, and fine lines. The wavelengths in IPL absorb excessive pigment in the skin (reds and browns) & stimulates collagen production to restore a more even complexion, improving skintone. IPL is a non-ablative treatment (no skin is removed during treatment), and typically requires little to no downtime.

Laser Vein Removal - Starting at \$99

We use minimally invasive techniques to eliminate the appearance of spider veins beneath the skin. Many people are candidates for laser or IPL treatments, which use heat energy to target and destroy unsightly and abnormal veins. Over time, the body absorbs these blood vessels along with any discoloration they may have caused.

LED phototherapy - \$25 to add on, \$50 stand alone

Blue Light Therapy – (405 nm to 420 nm) Blue light in this wavelength range has proven to have highly powerful bacteria fighting properties. Blue light photofacials can also help to combat acne, stabilize oil glands, ease inflammation, and purify the skin.

Red Light Therapy – (620 nm to 700 nm) Red light has the unique ability to penetrate deeply into the skin, where it can stimulate collagen production, rejuvenate the face, encourage cellular repair, and boost the circulation to the face so that the complexion appears more youthful and vibrant. Red light photo facials are used for reducing scarring, wrinkles, deep lines, and evening out the skin tone.

Neurotoxins (Botox, Jeuveau, Dysport) - from \$4.25-\$12 unit

Neurotoxins block signals between the muscle and the brain, ultimately preventing muscle contraction in a localized area. When the muscle relaxes, wrinkles smooth out and soften. Neurotoxins can be used for any type of wrinkle that has not been caused by sun damage or stretching of the skin due to gravity.

Fillers (Juvéderm, Restylane, Belotero) - \$595-\$830

Fillers help to restore volume and smoothness by replacing depleted hyaluronic acid just beneath the skin. When injected into the dermal layers, hyaluronic acid binds to water molecules, giving the face a fuller appearance in targeted areas. Physicians use fillers to treat many different types of lines and wrinkles though it is most frequently used as a dermal filler for smile lines and marionette lines around the mouth.

MIC amino acids (methione, inositol, choline)/ Vitamin B12 Injections - \$40

Vitamin B12 combined with MIC in an injection is used to facilitate weight loss and boost energy, aiding in the use of food for energy and in the breakdown of fat.

Kybella - \$550

KYBELLA® is the only FDA-approved injectable treatment for adults that permanently destroys fat cells under the chin for a gradually improved profile. Our healthcare specialist will help determine how many treatment sessions you need based on the amount and distribution of your submental fat and your personal treatment goals.

PRP therapy - from \$500

Used to combat hair loss and aging, Platelet-Rich Plasma (PRP) is the process of preparing platelets and human growth factors from a blood sample into an injectable plasma solution. The result, a "PRP serum", is activated to release essential growth factors in their natural and biologically-determined ratios, along with their signaling proteins.

Physician supervised medical weight loss - Call for pricing

We take a multifaceted approach to helping our patients lose weight. We always begin with nutritional counseling and lifestyle modifications that help increase cardiovascular output, lower stress, and improve sleep – all factors that can aid in healthy weight loss. Additional interventions are necessary on a case-by-case basis. Our treatment options help break through weight loss barriers and turn the body into a fat-burning machine.

TruSculpt ID - Treatment is individualized; Call to set up your free consultation

truSculpt iD is a safe and effective technology that is clinically proven to permanently eliminate fat cells in stubborn areas around your abdomen and flanks. truSculpt iD uses innovative Monopolar RF technology to selectively target fat and therapeutically heat it – until fat cells are eliminated by passing through the body naturally. Up to a 24% fat reduction is achieved in just one 15 minute treatment.

LATISSE® - 3ml \$119, 5ml \$169

Are your lashes thinning over time? Not enough lashes? LATISSE® grows lashes longer, fuller, and darker. LATISSE® is an FDA-approved treatment to grow eyelashes for people with inadequate or not enough lashes.

Non-surgical rhinoplasty Cost determined at consultation (average \$1000-\$1900)

A nonsurgical rhinoplasty utilizes the benefits of injectable fillers for an in-office "nose job." Dissolvable and reversible, a few tiny injections of a hyaluronic filler can equal big improvements in the appearance of one's nose. Meticulously placed filler injections can plump up the area around the bump, giving the illusion of a straight nose.
