## Informed Consent for Hair Removal

Customer's name: \_\_\_\_\_ Date: \_\_\_\_\_

Treatment sites: mono-brow, lip, chin, neck, face, arms, fingers, chest, areola, linea, underarms, back, buttocks, bikini, labia, scrotum, thighs, lower legs, feet, and toes.

Combinations: \_\_\_\_\_.

Previous hair removal methods \_\_\_\_\_ (shaving, tweezing, waxing, depilatories, electrolysis, laser)

The purpose of this procedure is to diminish or remove unwanted hair. The procedure requires more than one treatment and may produce permanent hair removal. The total number of treatments will vary between individuals. On occasion there are patients that do not respond to treatments. The treated hair should exfoliate or push out in approximately 2-3 weeks.

I understand this procedure is not 100% guaranteed. We recommend 6 treatments for 70-90% reduction. Factors that may affect outcome are prescriptions, hormone imbalance, pregnancy, menopause and age.

Alternative methods are waxing, shaving, electrolysis, and chemical epilation. Avoid tweezing, waxing, threading, and bleaching treatment area. Avoid tanning, sunburn, or sunless tanning 2 weeks prior to appointment as they may cause adverse reaction.

The following problems may occur with the hair removal system.

- 1. There is a risk of scarring.**
- 2. Short term effects may include reddening, mild burning, temporary bruising or blistering. Hyper-pigmentation (browning) and Hypo-pigmentation (lightening) have also been noted after treatment. These conditions usually resolve within 3-6 months, but permanent color change is a rare risk.** Avoiding sun exposure before and after the treatment reduces the risk of color change.

AND LASER SPA

- 3. **Infection:** Although infection following treatment is unusual, bacterial, fungal and viral infections can occur. Herpes simplex virus infections around the mouth can occur following a treatment. This applies to both individuals with a past history of herpes simplex virus infections and individuals with no known history of herpes simplex virus infections in the mouth area. Should any type of skin infection occur, additional treatments or medical antibiotics may be necessary.
- 4. **Bleeding:** Pinpoint bleeding is rare but can occur following treatment procedures. Should bleeding occur, additional treatment may be necessary.
- 5. **Allergic Reactions:** In rare cases, local allergies to tape, preservatives used in cosmetics or topical preparations have been reported. Systemic reactions (which are more serious) may result from prescription medicines.
- 6. I understand that exposure of my eyes to light could harm my vision. I must keep the eye protection goggles on at all times.
- 7. Compliance with the aftercare guidelines is crucial for healing, prevention of scarring, and hyper-pigmentation.

Occasionally, unforeseen mechanical problems may occur and your appointment will need to be rescheduled. We will make every effort to notify you prior to your arrival to the office. Please be understanding if we cause you any inconvenience.

ACKNOWLEDGMENT:

My questions regarding the procedure have been answered satisfactorily. I understand the procedure and accept the risks. I hereby release \_\_\_\_\_ individual) and Walla Walla Aesthetics & Laser Spa and Dr. Daniel Moullet MD from all liabilities associated with the above indicated procedure.
